

PCR-Fluorescence Detection Kit for Human Papillomavirus Genotype 16/18 DNA

Human papillomavirus (HPV) is a very common virus that infects nearly everyone at some point. HPV 16 and 18 are high-risk types known to significantly increase the risk of cervical cancer in women. The *Promotor*® PCR-Fluorescence Detection Kit for Human Papillomavirus Genotype 16/18 DNA is a qualitative in vitro polymerase chain reaction assay for the detection of high-risk HPV16/18 DNA in female cervical specimens.

Test Performance

PCR-Fluorescence Detection Kit for Human Papillomavirus Genotype 16/18 DNA	Specifications
Package Size	32 tests/kit
Technology	Real-time PCR
Target Region	E1
Sample Type	Cervical specimen
Genotypes	HPV 16/18
Controls	Internal control (β-globin) External controls
Precision	CV < 5%
Storage Conditions	-20 ± 5°C

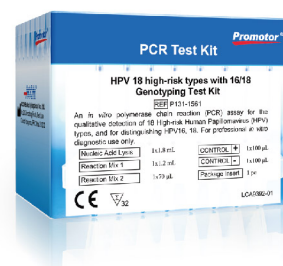

Order Information
